(7-3 Kitaigorodskijproezd, 109074, Moscow, Russia)

To the President of the Russian National CIGRE Committee

Mr. B.I. Ajuev

Dear Mr. Ajuev,

I would like to express my appreciation towards the attention You are paying to development of relay protection and automation systems of modern power systems. The obvious example of this is the International scientific and technical conference “Actual trends in development of power system protection and automation” which became traditional in Russia. The conferences already held are characterized by the high level of organization and, what is the most important, by the significance of the subjects discussed and the high level of the papers submitted, as evidenced also by regular participation of the leading CIGRE experts in the field of relay protection and automation from all-over the world.

I would also like to mention the great interest expressed by my colleagues and myself in the Russian reports, which reflected the high competence level of Russian specialists, understanding of future and actual development trends in power system automatic control systems, significance of research and development in the field of relay protection and automation in Russia.

Needless to say that the 5<sup>th</sup> International scientific and technical conference “Actual trends in development of power system protection and automation” which is planned to be held in Russia will also be successful. Information about the conference is placed on the official CIGRE site.

## International Council On Large Electric Systems Study Committee B5 – Protection and Automation

---

Success of the events held in Russia has convinced me of the potential and expedience to organize in Russia also the CIGRE SC B5 Study Committee Colloquium.

For this reason I am kindly asking you to consider the possibility of organizing the CIGRE SC B5 Colloquium, combined in date in place with the 6<sup>th</sup> International scientific and technical conference “Actual trends in development of power system protection and automation” in Russia in 2017.

In case of a positive solution to the issue Your suggestion will be discussed at CIGRE SC-B5 meeting during the 45<sup>th</sup> CIGRE Session in Paris in August 2014.

I appreciate you very much for attention and understanding of the problem.
